

Data Retention and Disposal Policy

2752676 Ontario Inc. (operating as Frugavo)

3546 Wyman Cres, Ottawa ON K1V 0Z1, Canada

Document version 1.0 · Effective May 2026 · Owner: Nabil Achache, Founder

1. Purpose and Scope

This policy defines how 2752676 Ontario Inc. (operating as Frugavo) retains and disposes of consumer data collected through the Frugavo service. It is intended to satisfy the data-minimization, storage-limitation, and right-to-erasure obligations under PIPEDA (Canada), GDPR (EU/UK), CCPA / CPRA (California), and equivalent state laws in the United States.

The policy applies to all systems operated by the Company and to all third-party data processors enumerated in Section 8.

2. Definitions

Consumer data. Any data tied to an identifiable end user, including transaction history, detected subscriptions, and authentication identifiers.

Retention. The active period during which the Company stores or processes consumer data on its own infrastructure.

Disposal. The point at which data is permanently removed from active storage and made unrecoverable on the Company's systems, subject to provider-side backup windows described in Section 7.

Account deletion. A user-initiated event triggered by POST /api/account/delete or by support request to privacy@frugavo.com, which cascades through every per-user table and connected third-party service.

3. Data Categories and Retention Periods

All categories below are retained while the user maintains an active account. The "Maximum retention beyond account closure" column is the absolute upper bound; actual disposal is immediate on account deletion, with the stated window reflecting provider-side backup retention (Section 7) that the Company does not directly control.

Data category	Primary store	Active retention	Max post-closure
Bank transaction history	Supabase (plaid_transactions)	While account active	7 days (backups)
Detected subscriptions and bills	Supabase (subscriptions, scan_snapshots)	While account active	7 days (backups)
Per-charge ledger	Supabase (subscription_charges)	While account active	7 days (backups)

Authentication identifiers	Clerk (Clerk-hosted)	While account active	30 days (Clerk policy)
Billing records	Supabase + Stripe	7 years (CRA tax)	7 years (legal hold)
Plaid access tokens	Supabase (encrypted)	Until disconnect	Revoked on deletion
Audit and feedback events	Supabase (feedback_events)	While account active	7 days (backups)
Operational logs	Netlify, Sentry	30 days rolling	30 days (rotation)
Marketing waitlist email	Supabase (waitlist)	Until unsubscribe	Immediate on request

Billing records are retained for seven years from the close of the tax year in which they were created, to satisfy Canada Revenue Agency record-keeping requirements (Income Tax Act, Section 230). On account deletion, the Company retains only the minimum non-personal billing-event metadata necessary to demonstrate compliance, and removes all linkable user identifiers.

4. Triggers for Data Disposal

Consumer data is disposed of upon any of the following events:

- User-initiated account deletion via Settings → Delete account (immediate).
- User-initiated deletion request submitted by email to privacy@frugavo.com (within 30 days, in accordance with PIPEDA and GDPR Article 17 timelines).
- Voluntary disconnection of a Plaid Item (transaction data tied to that specific connection is retained for ongoing dashboard display unless the user also deletes the account).
- Detection of fraud, abuse, or breach of the Terms of Service that requires terminating the account.
- Provider migration or sunset that renders continued storage technically infeasible (user is notified at least 30 days in advance).

5. Account Deletion Procedure

The account deletion endpoint (POST /api/account/delete) executes the following steps in order. All steps are best-effort; failures in third-party calls are logged but do not block the local-database wipe, ensuring the user is never left with un-deleted personal data in our systems.

- Cancel any active Stripe subscription immediately, without proration.
- Call Plaid /item/remove on every connected Item to revoke the access token at the source.
- Hard-delete every row across all 18 per-user tables in Supabase, in dependency order: subscription_charges, cancellations, monitoring_alerts, feedback_events, user_overrides, user_preferences, subscriptions, scan_runs, scan_snapshots, plaid_transactions, ai_calls, billing_email_dispatches, payment_methods_mirror, billing_entitlements, subscriptions_billing, billing_events, stripe_customers, plaid_items.
- Delete the user's record from app_users last, completing the cascade.

Deletion is immediate and irreversible. The Company does not operate a soft-delete tier or a grace period during which data could be restored.

6. User Rights

Users may exercise the following rights at any time. Requests are honored within 30 days of receipt, in accordance with PIPEDA, GDPR Article 17, and CCPA / CPRA §1798.105.

- Right to access: receive a copy of all personal data held about them.
- Right to rectification: correct inaccurate or incomplete data through the dashboard or by request.
- Right to erasure: trigger the full deletion described in Section 5.
- Right to data portability: receive a machine-readable export of their transaction history and detected subscriptions.
- Right to object: opt out of marketing communications and configurable monitoring features.

All requests should be sent to **privacy@frugavo.com**. The Company will verify the requester's identity (typically by matching against the account email) before fulfilling the request.

7. Backup Retention

Supabase performs daily database snapshots and offers point-in-time recovery within a seven-day window. After account deletion, data may persist in Supabase backups for up to seven days before being purged. The Company does not directly access these backups for restoration of deleted user data under any circumstance; the backups exist solely for disaster recovery in the event of database failure.

If a user explicitly requests removal from backup snapshots (typically for GDPR Article 17 erasure), the Company will coordinate with Supabase support to expedite the purge.

8. Third-Party Processor Retention

On account deletion the Company can guarantee disposal only of data it directly controls. Third-party processors retain data per their own policies, summarized below for transparency:

Processor	Retention behavior
Plaid	Transaction data is purged within 30 days of /item/remove, per Plaid's published data-retention policy.
Stripe	Billing records (invoices, charges, customer objects) are retained for seven years per Stripe's compliance obligations; the Company has no authority to purge these early.
Clerk	Identity records are deleted within 30 days of account closure; the Company can trigger an immediate purge via the Clerk Admin API on request.
Resend	Email logs are retained for 30 days; on deletion, future emails will not be sent but historic logs persist until rotation.
Supabase	See Section 7.

Netlify	Application logs are retained for 30 days on rolling rotation; no per-user identifiable data is logged beyond a hashed user ID.
Anthropic	Inference traffic is retained per Anthropic's API usage policy; the Company sends only transaction descriptors (no user identifiers) to the classifier.
Upstash	Cache entries auto-expire within minutes to hours; no long-term retention.

9. Disposal Procedures and Verification

9.1 Database disposal

Deletion of consumer data from Supabase is performed via the supabase-js client's DELETE operation issued against every per-user table. Rows are removed from the primary table immediately. Storage-layer reclamation occurs asynchronously through Postgres' VACUUM process and the underlying AWS RDS block-storage allocator, both of which are operated by Supabase and inherit AWS's SOC 2 / ISO 27001 disposal controls.

9.2 Token revocation

Plaid access tokens, even when encrypted at rest, are first revoked at Plaid via /item/remove, then deleted from the database. Revocation invalidates the token at the source so any residual copy is non-functional.

9.3 Hardware disposal

The Company does not operate any on-premise servers, storage arrays, or backup media. Cloud-provider hardware disposal (when storage devices are decommissioned by AWS, Netlify, Stripe, or other vendors) follows each provider's NIST 800-88 compliant media-sanitization procedures; the Company relies on the vendors' SOC 2 attestations to confirm.

10. Compliance Review

This policy is reviewed at least quarterly and updated whenever applicable law materially changes, a new third-party processor is added, or the deletion procedure is modified. The review is logged in the document version history. Each policy revision is communicated to active regulated counterparties (payment processors, banking data aggregators, and similar) within thirty days.

11. Approval

Approved by	Nabil Achache, Founder and Privacy Officer
Entity	2752676 Ontario Inc.
Effective date	May 25, 2026
Next scheduled review	August 25, 2026
Document version	1.0
